Subject index

abscisic acid 9ff, 287ff, 332ff, 384ff, 519, 523, 572
Acetobacter xylinum 468, 469
acetolactate synthase 249ff
acetyl-esterification 545ff
acid-growth-theory 404
Acinetobacter calcoaceticus 524
actin 557, 563, 564
actin genes, nucleotide sequence 63, 64
– – of rice 61, 66, 67
– – of soybean 61, 66, 67
– – of *Striga* 61ff
Actinidia 330
acylcyclohexanediones 130, 132, 134, 135
adenine nucleotides 526ff, 537ff
adenylate energy charge 526ff, 537ff
– kinase equilibrium 526, 527, 533, 535, 540, 541
adhesion of cells 545ff
Aegialitis annulata 526ff, 543
agravitropic roots 379ff
Agrobacterium 90, 91
Al^{3+} – Ca^{2+} interactions 98ff, 104ff
alanine 232ff
aleurone of barley 574, 575, 577, 579
alga, halophilic 40ff
algae, characean 347ff
– marine 461, 462
alginates 462, 468, 469
alginic acid 462, 463, 468, 470
Alternaria 437
– *brassicae* 437
– *brassicicola* 437
aluminium rhizotoxicity 98ff, 104ff
Amaranthus 296, 304
– *edulis* 233, 236
– *tricolor* 304
amino acid biosynthesis 215, 219
– – branched chain 249, 250, 253, 254
– – content in maize leaves 211, 215, 216
– – sequences of auxin-regulated genes 359ff
– – – of lipid-transfer proteins 575ff
– – – of vacuolar ATPase and pyrophosphatase 398, 399
amino acids 497ff
– – 1-aminocyclopropane-1-carboxylic acid 431ff, 453, 459
– oxidase 453ff
5-aminolevulinic acid 92ff, 256, 259
α-aminooxy-β-phenylpropionic acid 155
ammonium assimilation 189, 211ff
Amphidium 40, 42, 43
α-amylase 9, 13
amyloplast isolation 204, 205, 208
Anabaena variabilis 330
anion channel 295ff
– blockers 299, 300, 304
antenna pigments 176
antheraxanthin 176, 177, 179, 181
anthocyanin 88, 90, 91
Antirrhinum majus 33ff
antisense potato tubers 16ff
Apis 367
Apium nodiflorum 428
apoproteins of chlorophyll-protein complex 92ff
Arabidopsis 63, 73, 128, 303, 339, 361, 363, 395, 398, 399, 401, 494, 519, 579
– *thaliana* 13, 221, 249ff, 276ff, 296, 303, 392
– – mutants 557ff
arabinose 502, 504, 508, 510
Archebacteria 524
ascorbate 581ff
ascorbic acid 581, 582
aspartate 232ff
– aminotransferase 202ff
assimilates, production and diurnal utilization 497ff
Asteraceae 31, 33
ATP/ADP ratio 46ff
– effect of vanadate 49, 50
ATP hydrolysis 538, 541ff
ATPase activity 541
– expression 398, 399
– vacuolar 395ff
auxin 430, 341, 344, 345
auxin-mediated growth of maize coleoptiles 404ff
auxin-regulated mRNAs 359ff
Avena 564
– phytochrome A 306ff
– *sativa* 199
Azolla 173

Bacillus megaterium 520, 521, 524
– *subtilis* 509
ballistic micro-targeting 84ff
Balsaminaceae 31, 33
band plasmolysis 269
basic proteins 446ff
Bellis perennis 33ff
benzylaminopurine 287ff
Beta vulgaris 497
– – var. *altissima* 545ff
blockers of anion channel 299, 300, 304
– of calcium channel 296
blue-light photoreceptor 1ff
Bombus 367
Borya nitida 415, 419
bract leaf 276
– initiation and development 281ff
Brassica 221, 489, 491, 492, 494
– *campestris* 277, 284
– *napus* 13, 359, 360, 362, 370, 384ff, 574
brefeldin A 404ff
Bryopsis maxima 41, 44
Bulbochaete hiloensis 357
bundle-sheath cells of barley leaves 310ff
Bunsen-Roscoe reciprocity law 306

C_3 plants 534
C_3/C_4 plants 208, 211, 212, 218, 219, 268
– intermediate 232ff
C_5-pathway 256, 259
Ca^{2+}, effect of gravistimulation 379ff
calcium channel 303
– – blockers 296
– displacement 104ff
– uptake 98ff, 104, 105
callase 221
calyculin 183
carbohydrate content 54
– metabolism 52ff, 519, 524
carbohydrates 497
carbon assimilates 497ff
– assimilation 211, 212, 218, 219, 232ff
– concentrating mechanism 46, 49
– partitioning 211ff, 567ff
– reserves, retranslocation 567ff
carbonic anhydrase 46ff
– – activity 46, 48ff
β-carotene content 473, 477, 478
carotenoides 414, 415, 417, 419, 587
caryophyllene 367ff
Casparian strip 269ff
– light effects 269ff
– regulation of development 272
– ultrastructure 270
cDNA clone, embryo-specific 519ff
cDNAs *Sa*tap35/44 221ff
Ceanothus 554
cell adhesion 545ff
– cycle 118ff
– – progression 125
– division in shoot apex 69, 73
– elongation 340, 343
– sap 312, 314, 315
– suspension cultures of sunflower 431ff
– wall(s) 347, 348, 350, 352, 353, 357, 461ff
– – cotyledonary 502ff
– – extensibility of maize coleoptiles 404ff
– – protein secretion 404ff
cellulose 461ff
– allomorph 461, 465ff
– crystallinity 461ff
Centranthus ruber 33ff
cerulenin 362
Chara 172, 300, 304, 347ff
– *australis* 347
– *corallina* 300, 347, 348, 350, 353
Charales 348, 353, 357
charophytes 347
Chenopodium 58, 59
– *rubrum* 473ff
chimera plant 75ff
chitinase 431ff
Chlamydomonas 256, 260, 325, 329, 330
– *reinhardtii* 41ff, 46ff, 325
chloramphenicol 324, 325, 327ff
Chlorella 40, 49, 50, 256, 260
– *sorokiniana* 43
chloride channel 295ff
Chlorogonium 7
chlorophyll 414ff
– accumulation 92ff
– fluorescence 261, 263, 267, 324, 326, 327, 415, 417ff
– – analysis 537
– protein pattern 473ff
chlorophyll a fluorescence 216, 217
chlorophyll a/b binding antenna proteins 176, 177
– – protein 211, 217ff
– protein complex 92ff
– ratio 473, 475, 478
chlorophyllous, homoio- 414, 415, 418, 419
– poikilo- 414ff
Chlorophyta 348, 357
chloroplast development 92
chromatin 446ff
chromatography, anion-exchange 183, 185, 186
– size-exclusion 183, 185, 186, 198
Chrysanthemum 33, 35, 37
cinnamate-4-hydroxylase (C4H) 155ff
cinnamic-acid metabolism 365, 367
climatic factors, influence on fragrance 365ff
CO_2 assimilation 414ff
– fixation in the dark 52, 53, 56, 57
– limited photosynthesis 526ff, 537ff
– pressure 232ff
Coix lachryma-jobi 517
coleoptiles 340ff
– of maize 404ff

Coleus blumei 33, 35ff
Commelina benghalensis 33, 34
companion cell types 31ff
concavalin A-sepharose 198
cotyledon unfolding 306ff
cotyledons of *Lupinus* 502ff
Crassulacean acid metabolism (CAM) 395
– – – induction 287ff
Craterostigma plantagineum 419
crystallinity of cellulose 461ff
cucumber *lh* mutant 2
Cuphea ignea 33ff
cysteine rich domains 512ff
Cytisus purpureus 75ff
cytokinesis 347, 348, 353
cytokinins 287ff
cytoplasmic bridge(s) 347, 348, 350, 352, 353, 357

D1 protein 473, 476, 478
Datura 250, 253
defense response 432
defoliation stress 567ff
desiccation tolerance 519, 523
– tolerant embryos 520
– – plants 414ff
development, specific aspects 557
dictyosomes 404, 406ff, 547, 548, 550ff
Dipsacaceae 31, 33
disulphide bands 513, 516, 517
dithiothreitol 324, 328ff, 526, 527, 530, 531, 534, 537, 540, 542, 581, 585ff
diurnal utilization of assimilates 497ff
DNA flow cytometry 118ff
Dolichos biflorus 144ff
Drosophila 524
– actin gene 61
Dunaliella salina 40ff, 47, 50
– *tertiolecta* 40, 44

Egeria densa 246
Egregia menziesii 461ff
elongation of coleoptile cells 340ff
– of stem 130ff, 489ff
embryo development of wheat 9ff, 84, 86, 87, 90
– – of maize 90
– differentiation 118, 125, 127, 128
– germination of maize 118ff, 125ff, 332ff
– specific cDNA clone 519ff
embryogenesis 519, 520, 523, 524
– regulators 384, 385, 392
embryos, dicotyledonous 384ff
– viviparous 332ff
emission of flower volatiles 365ff
endoplasmic reticulum 347, 350, 355ff, 512ff
energy dissipation, nonradiative 537, 538, 543
enzyme immunolocalisation 155ff
enzymes of lignin synthesis 155ff
epicotyl 269ff
epidermal cells of barley leaves 310ff, 317ff
– solute concentrations 317ff
Epilobium montanum 33ff
Escherichia coli 27, 28, 206ff, 224, 249, 253, 259, 453, 456, 459, 558
ethephon 431, 436ff
ethylene 431ff, 453, 459
– biosynthesis 453
Exacum affine 33, 35ff
exine 221ff
exo-(1→4)-β-D-galactanase 502ff
exocytosis 405, 412, 413

Fabaceae 31, 33, 169, 173
farnesol 287, 289ff
fatty-acid desaturases 359ff
fatty-acids in wheat embryos 13, 14
feedback control 249ff
ferredoxin 264, 265
Flaveria 232ff
– *bidentis* 232ff
– *brownii* 236
– *floridana* 232ff
– – metabolic regulation 236
– *pringlei* 232ff
– *trinerva* 236, 291
flavonoids 421, 428
floral evocation 284, 285
flower primordia initiation 276ff
flowering promotion 130ff
fluence responses, low and very low 306ff
fluorescence quenching 262, 263, 265ff, 537ff
– – energy dependent 176ff, 587
fragrance composition 366ff
– emission 365ff
Frankia 554
freeze substitution 421, 424, 427
friable sugar-beet calli 545ff
fructose-6-phosphate 483ff
Fucales 462
Fuchsia hybr. 33, 35ff
fucose 464
fungal infection resistance 431
fusicoccin 359ff, 404, 412, 413

galactan of lupin 502, 504ff
exo-(1→4)-β-D-galactanase 502ff
galactose 462, 464, 546, 548, 553
β-galactosidase 502ff
Galeobdolon tetrahit 33, 35, 37
gas-exchange 232
gel electrophoresis, two-dimensional 557ff
gene activity 446
– expression 125, 156, 162, 44, 574ff
– – embryo-specific 332ff
– – in embryos 384ff
– – of glutamine synthetase 189f
– – of mRNAs 359ff
– – of nitrite reductase 110ff
– – (*rbs* S), fluence-rate dependent 1ff
– – regulation 372, 373, 375, 378
– – transient 84ff
– transfer, direct 84, 86, 88
generative nuclei 446ff
genes, embryo-specific 519, 520
– seedling-specific 574
genetic characterization of mutants 557
Gentianaceae 33
germination 384ff, 502, 503, 505
– of maize 118ff, 125ff, 332ff
germinative processes 9, 13
gibberelic acid (GA_3) 384, 386ff
gibberellin(s) 130ff, 372ff, 489ff
Ginkgo biloba 33, 36, 37
gland cells 421
globular proteins 347
Globulin genes 332ff
β-1,3-glucanase 431ff
glucose dehydrogenase 519ff
glucose-6-phosphate 480, 481, 483ff
β-glucuronidase 88, 90
glutamate 202
glutamine 211, 212, 216
– synthetase 189ff
– – activity 43, 44
– – cDNA, cloning 190
glutamyl-tRNA synthetase 256ff
glutaraldehyde 458
glutathione reductase 137ff
– S-transferases 359
glycerate-3-phosphate 232ff
Glyceria 478
Glycine 173
– *max* 369, 384ff
glycine 232ff
glycinebetaine 397, 399
glycoprotein 441ff
Golgi apparatus 404ff
Gomphrena 233
Gossypium hirsutum 384ff, 526ff, 537ff
Gouy-Chapman-Stern model 104, 106, 108
Gracilaria 582
gravistimulation 379ff
growth gradients 340ff
– kinetics of coleoptile 341
– regulators 287ff

Halicystis 468
haustorium of witchweed 61ff
– development 62
Helianthus annuus 73, 266, 431ff
herbicide-resistant mutants 249, 254
herbicides 249, 253, 254
High Irradiance Reaction 6, 7
high irradiance responses 306, 489
Hippeastrum belladonna 451
histone(s) 446, 447, 449ff
– biosynthesis 118ff
– H4 69ff
– – in-situ hybridization 71ff
– – sequence analysis 70, 72
– kinase 183, 187
homoiochlorophyllous plants 414, 415, 418, 419
Hordeum vulgare 69, 92ff, 110ff, 310ff, 317ff, 497ff, 519ff, 574ff
host/parasite interaction 75
hydrodynamic stresses 461, 467
hydrogen peroxide 195
hydrolase-inhibitor-like protein 574, 575
3-β-hydroxylation 130ff
hypocotyl of mung bean 359ff
– tissue, differentiating and wounded 155ff

immunocytolocalization 453ff
immunolocalisation of enzymes 155ff
Impatiens sultani 33ff
inflorescence development 130, 132, 134, 276ff
intermittent light 176ff
*iso*leucine 249ff

Klebsiella aerogenes 520, 521, 524

Laburnocytisus adamii 75ff
Laburnum anagyroides 75ff
Lamiaceae 31, 33, 35
Laminaria groenlandica 356
Laminariales 462
Lamium album 33ff
late-embryogenesis-abundant mRNAs 384ff
– protein 359ff
leaf ageing 313ff, 317ff
leaves of dicotyledons 31
lectin, localization 144ff
Ledebouria socialis 230, 421ff
leucine 249ff, 404ff
light control of glutamine synthetase 189
– effects on elongation 489, 490
– harvesting complex of photosystem II 473, 475ff
– – chlorophyll a/b-protein complex 92ff
– intermittent 176ff
– pulses 261ff
– stress 325, 327, 473, 475ff
lignin synthesis 155ff
Lilium longiflorum 446ff
Linaceae 31, 33
lincomycin 329
Linum flavum 33, 35, 37
lipid-transfer proteins 574ff

– – amino acid sequences 575ff
Lolium temulentum 130ff
low-fluence responses 306ff
Lucifer Yellow 165, 167, 169, 171ff
lupin galactan 502, 504ff
Lupinus albus 173
– *angustifolius* 502ff
– *luteus* 165ff, 503
lutein 325, 329, 473, 477, 478
Lycopersicon 173
– *esculentum* 69ff, 372ff
– fruit 453ff
– *pennellii* 70
Lythraceae 31, 33
Lythrum salicaria 33ff

malate 497ff
– dehydrogenase 310, 312, 14
maltose binding protein fusions 224ff
Malus x *domestica* fruit 453ff
mannose 480, 486, 487
marine algae 461, 462
marker genes, visible 84ff
mechanical stress 462, 468, 469
Medicago sativa 202ff
Mehler ascorbate-peroxidase reaction 526, 527, 530, 531, 534, 542
membrane potential 165, 166, 171, 172, 295ff
meristem cells of wheat embryo 84ff
Mesembryanthemum crystallinum 287ff, 395, 401, 402
mesophyll cells of barley leaves 310ff
methyl-esterification 545ff
6-methylpurine, effect on nitrate reductase induction 42, 44
microcystin 480, 481, 485, 486
– A 183
microprojectile bombardment 84
microspore developing 221ff
microspores 421, 422, 424ff
minor-vein configuration 31ff
mobilisation of storage polysaccharides 502, 505, 510
– of storage reserves 568
Monoraphidium braunii 44
Monstera 478
Moricandia 232ff
– *arvensis* 232, 234ff
– – metabolic regulation 236
mRNA(s), auxin regulated 359ff
– glutathione reductase 137ff
– late-embryogenesis-abundant 384ff
– of pollen tubes 441ff
– populations, translatable 372ff
Münch hypothesis 165
Musa cavendishii 52ff
mutant(s) 557ff
– gibberellin-deficient 489, 493, 494
– of maize, viviparous 332, 333, 335ff
– photomorphogenic 490
– of tomato, gibberellin-deficient 372ff

NaCl 287ff
– stress 317, 318, 320, 322
NADP-malic enzyme 287, 289ff
needles of Scots pine 195ff
Nicotiana plumbaginifolia 191, 192
– *sylvestris* 398, 400, 401
– *tabacum* 192, 306, 355, 384ff, 400, 441ff
– *tomentosiformis* 398, 400, 401
Nitella 352, 357
nitrate 110ff
– assimilation 211ff
– channel 295ff
– reductase 183ff, 211, 212, 219
– – ATP-dependent inactivation 192ff
– – dark induction 40ff
– – inactivation 187
– – localization in *Dunaliella* 43, 44
nitrite assimilation 211ff
– reductase 40, 43, 44, 110ff
– – in mustard 116
– – in spinach 116
– – in tobacco 116
nitrogen assimilates 498, 499
– fixation 202, 203, 208
– starvation 40ff
Nocardia asteroides 199
nuclear differentiation 446
nuclei, generative 446ff
– vegetative 446ff
nucleotide sequence of glutamine synthetase 191
– – of lipid-transfer proteins 575ff
nutrient distribution 310, 315

Oenothera biennis 33ff
okadaic acid 183, 480, 481, 485, 486
oleic acid / oleosin 13, 14
oleosin 333, 338
oligomerization through disulphide bonds 513
Onagraceae 31, 33
oncogene (proto-) suppressor gene 125ff
Orchidaceae 369
Origanum majorana 33ff
orthogravitropism 379, 382
Oryza sativa 192
osmiophilic bodies 421, 424ff
osmium 458
osmolality 310ff, 317ff
osmoregulation 239, 243, 246, 247
osmotic potential 9ff
– shock 9, 12ff
osmoticum 480, 486
ovule abscission 384ff
oxaloacetate 202
oxidative stress 137, 141
ozone fumigation 137, 139ff

P700 261ff
paclobutrazol 132
Panicum milioides 232
paraclades 276ff
– initiation and development 280
paraquat treatment 137ff
parasitic plant 62
pea plants 176ff
peas, stressed 137ff
pectins 545ff
Pelvetia 469
pentose-phosphate pathway 52, 53, 56, 58
peritapetal membrane 221, 227, 229
peroxidase, cationic 155ff
Petunia hybrida 200
pH decrease, light-dependent 581ff
Phaeophyta 353, 357, 463
phase change 276, 277, 284, 285
Phaseolus 173, 174
– *vulagris* 1ff, 155ff, 192, 236
phenethyl acetate 365, 367ff
L-phenylalaninammonium-lyase (PAL) 155ff
Philadelphus coronarius 33ff
phloem 165ff
– loading 31ff
– apoplasmic 31ff
– symplasmic 31ff
– transport 239ff, 497
– unloading 239ff
Phoma lingam 437
phosphate, inorganic 480, 481, 484ff
phosphoenolpyruvate 232ff
– carboxylase 211ff, 287ff
phosphoglucose isomerase 480, 484
phosphorylation 183
– histone 186
– nitrate reductase 186
photocontrol of nitrite reductase 110ff
photodamage 324, 325, 329, 330
photoinhibition 473ff
photoinhibitory responses 324ff
photon fluence rate 2, 6
– flux density 178
photooxidative treatment of plastids 110, 114ff
photophosphorylation 526, 527, 529, 530, 534
photoprotection 324, 325, 329, 330
– zeaxanthin-related 324
photoreceptor 340, 341
– blue light 1ff
– coaction 190, 192
photoregulation of gene expression 1
photosynthesis 211ff, 526ff, 537ff
– effect of vanadate 46ff
photosynthetic apparatus 414, 415, 417, 419
– metabolism 232
– oxygen evolution 5, 6
– pigments 414ff
photosystem I 261ff
– II fluorescence quenching 537ff
phragmoplast 347, 348, 350, 353, 356, 357
phycoplast 356
phytoalexins, isoflavonoid 156
phytochrome 110, 113, 114, 116, 189ff, 306ff, 340ff
– regulation 489ff
phytohormone(s) 332, 333, 336, 436
phytotoxin 360
Picea abies 195
pigment composition 473, 474, 476ff
– contents of pea leaves 179
– protein complex(es) 587
Pinus 478
– *pinaster* 190
– *radiata* 190
– *sylvestris* 189ff, 195ff
– *thunberghii* 190
Pisum 173
– *rbc* S genes 2
– *sativum* 33ff, 137ff, 176ff, 239ff, 269ff, 489ff
plasma membrane 347, 350, 352, 357
plasmodesmata 31, 33, 165, 166, 173
– formation 347ff
– interspecific 75ff
plastocyanin 581ff
Plumbago zeylanica 451
poikilochlorophyllous plants 414ff
pollen 446ff
– allergens 230
– development 441ff
– mother cells 372, 375
– tubes 441ff
pollenkitt 421, 425, 428
– synthesis 422, 427
pollinators 365, 367
polygalacturonic acid 545, 547, 552, 554
polysaccharides of marine algae 461ff
Portulacaria afra 287
postabscission stage of embryos 384ff
potassium efflux 296, 304
potato tubers 16ff
– – carbohydrate metabolism 23
– – enzyme activities 2o
– – metabolite levels 20, 21
primordia of flowers and leaves 276ff
pro-Ubisch bodies 221, 227, 229
proliferating cell nuclear antigen 118, 119, 122, 123
protein biosynthesis 259, 260

– bodies 512, 513, 516, 517
– composition 473, 477
– D1 473, 476, 478
– kinase 183, 184, 186, 188
– pattern analysis 557ff
– phosphorylation 211ff, 480ff
– purification 183ff
proteins, basic 446ff
– of cell-wall, secretion 404ff
proto-oncogenes 125ff
proton-motive force 165, 174
proton pump, vacuolar 395ff
protoplasts 395ff
Pseudotsuga menziesii 190
pulse-amplitude modulation technique 263
Pyrenopeziza brassicae 437
pyrophosphatase 395ff
– expression 398, 399
– fructose-6-phosphate phosphotransferase 16ff
pyruvate 232ff

Ranunculaceae 33
Ranunculus ficaria 33ff
red/far-red 306ff
red-light-induced stimulation 340ff
rehydration 414ff
Rhizophora 478
rhizotoxicity 98ff, 104ff
– of Al^{3+} 105, 108
– of H^+ 107, 108
– of TEC^{3+} 106, 108
Ribes napus 370
ribitol dehydrogenase 519ff
ribulose-1,5-bisphosphate 232ff
– carboxylase/oxygenase 1ff
rice seedling elongation 131, 135
Ricinus 59, 173, 174, 246
– *communis* 480, 486, 487
– cotyledons 481, 487
ripening bananas 52ff
– fruits 459
root growth 239, 243
– – inhibition 98ff, 104ff
– nodules of alfalfa 202ff
roots, agravitropic 379ff
– of wheat 295ff
Rosa glauca 554
Rubisco 139, 140
Rubus 432

Saccharomyces cerevisiae 128
salinity 295, 296, 302ff, 317
Salix 173
Salmonella typhimurium 249
salt stress 395, 396, 399, 401, 402
Saxifragaceae 31, 33
Scenedesmus 212
– *obliquus* 47, 256ff
Schizosaccharomyces pombe 128
Sclerotinia sclerotiorum 437
Scrophulariaceae 31
seedlings of pea 239ff, 269ff
– of Scots pine 189ff
– of tobacco, transgenic 306ff
Selenastrum 40
– *minutum* 40, 44, 212
Senecio vulgaris 33ff
serine 232ff
shade-avoidance responses 489
shoot apical meristem 69, 72, 73
sieve element/companion cell complex 165ff
signal sequence 224, 227, 229
Sinapis alba 193, 221ff, 276, 277, 284
single-cell 317ff
– sap-sampling 311, 312, 314, 315
sink activity 567
– manipulations 242, 246
– strength 239ff
Solanum 173
– *tuberosum* 480ff
– – transgenic 16ff
solute(s), balance sheet 311, 313, 321
– compartmentation 310, 314, 315, 322
– concentrations 312ff
– – epidermal 317ff
– – vacuolar 318ff
– inorganic 310ff, 317, 320
– intercellular 310, 314, 317, 322
– organic 310ff, 317
Sophora japonica 147
Sorghum 489, 492
– seedlings 2
– *vulgare* 112
source manipulations 241, 246
source/sink relations 239, 240
Spinacia oleracea 183ff, 264, 497ff, 581
sporopollenin 221, 227, 229
stamen development 372, 375
starch 497ff
– accumulation 16, 28
– breakdown by ripening bananas 52ff
stem elongation 130ff, 489ff
Stern-Volmer nonphotochemical fluorescence quenching 538ff
stomatal movement 219
storage polysaccharides, mobilisation 502, 505, 510
– proteins 512, 513, 516, 517
– reserve mobilization 568
stress, defoliation 567ff
– environmental 527, 534
– hydrodynamic 461, 467
– mechanical 462, 468, 469
– oxidative 137, 141
– photosynthetic 533ff, 538, 542
stress-related gene products 162
stresses 537
Striga asiatica 61ff
stromal enzyme activation 261
Succisa pratensis 33, 34
sucrose 16ff, 497ff, 567, 572
– metabolism 23ff
– phosphate synthase 211ff, 480ff
superoxide dismutase 195ff
– – amino acid sequence 198ff
symplasm 347
symplasmic autonomy 165ff
– – development 172
– connection 75, 81, 82
– continuity 169, 172
– discontinuity 165
– transport 75, 81, 82
Synechocystis 256, 360, 362

tapetum 221ff
– development 421ff
– specific transcripts 221ff
Taraxacum officinale 33ff
technique of microelectrode ion-flux estimation 98, 99, 102
temperature acclimation 324ff
– limited photosynthesis 526ff, 537ff
Tetrahymena 451
tetrapyrrole biosynthesis 256
thylakoid lumen 581ff
– membrane(s) 473, 474, 477ff
thymidine kinase activity 118ff
tobacco, reformation of vacuoles 395ff
– seedlings, transgenic 306ff
toxicity of Al^{3+} 98ff, 194ff
Tradescantia 451
transcript level of glutamine synthetase 189, 191ff
transgenic plants 16ff
– – analysis 18
– tobacco seedlings 306ff
transition to flowering 276ff
– – mutants 285
translatable mRNA populations 372ff
translation/glycosylation system 441, 442
translocation of carbon reserves 567, 569, 570
triacylglycerol accumulation 10, 11, 13
– breakdown 9, 11
– fatty-acid composition 9, 11, 13, 14
– metabolism 10
– synthesis 9ff
triazole-type growth retardant 431, 433, 437
Trichinella spiralis (nematode) 199
Trifolium repens 365ff
triose-phosphate 232ff
– isomerase 205, 208
tris(ethylenediamine)cobaltic ion 104ff
Triticum aestivum 9ff, 84ff, 98ff, 104ff, 295, 340ff
– *turgidum* 295
Tropaeolaceae 31, 33
Tropaeolum majus 33, 35, 503, 509
Tulipa gesneriana 451
tumor suppressor gene 125ff
tunicamycin 444
turgor maintenance 239

Ubisch bodies 423, 424ff
Ulva rotundata 324ff
ureides 202, 208
uronic acid 461, 462, 464, 467, 468

vacuolar proton pump 395ff
– sap(s) 317ff
vacuoles 144ff
– re-formation 395ff
Valerianaceae 31, 33
Valerianella locusta 33, 35ff
valine 249ff
– resistant mutant 249ff
vanadate 46ff
– effect on ATP/ADP ratio 49, 50
– effect on photosynthesis 48
variable-fluorescence decrease ratio 414, 417ff
vegetative nuclei 446ff
Venus fly-trap 304
very-low-fluence responses 306ff
Vicia faba 58, 118
Vigna radiata 359ff
– *sinensis* 344
violaxanthin 176, 179, 181, 325, 328, 329, 478
– de-epoxidation 526ff, 537ff, 581ff
Vitis vinifera 567ff
viviparous embryos 332ff
– mutants 332, 333, 335ff, 392
Volvox H4 genes 72

wall-loosening factor 404, 405, 412, 413
water stress 287ff, 414
wounding 155, 156, 159ff

xanthophyll cycle 176ff, 324, 325, 328, 329, 526ff, 537ff, 581ff
– – pigment(s) 473, 477, 478
Xenopus laevis oocytes 453, 512ff
Xerophyta 418
– *scabrida* 414ff
xylose 462, 464

Zea 246
– *diploperennis* 137
– *mays* 211ff, 233, 236, 379ff, 404ff, 512ff
– – embryo germination 118ff, 125ff, 332ff
zeaxanthin 176ff, 324, 325, 328, 479, 581, 585
– related photoprotection 324
γ-zein 512ff
